Operative G T Purdy

Nov. 5th, 1926

Re: William Stevens' Eyes.

Operative interviewed Dr. Hazzard, Optician at 133 Albany St., New Brunswick, N.J. who stated that he looked after the fitting of glasses for William Stevens. The last record he has of William Stevens' eyes is as follows:

Right Eye - Myopia $4\frac{1}{2}$ drop Sph. combined with $1\frac{1}{2}$ drop cylinder

Focus of right 1 Mgridin would be at 9 focus other myridin would be 8"

Left eye - Myopia $1\frac{1}{2}$ drop Sph. combined with 1 Dropter cylinder focus on left eye.

1 Myridin 26" in the other 16 inches 20/200 normal and zero on the right eye.

Dr. Hazzard stated that William Stevens could not see the name on the street car or see an automobile license plate without his glasses. Dr. Hazzard arranged to let me look through glasses which would make my eyes the same as Willie Stevens without his glasses. I could not read a license plate or read the name on the side of a truck. I asked the doctor if he thought Willie could see in a dark woods in the nighttime without his glasses and he stated that he does not think he could see very far.

Respectfully submitted:
